

# **30kW Photovoltaic Container for Airport Use**

## Overview

---

How do airports choose a solar PV plant?

Some of the basic studies/assessments airports need to consider while selecting a site for the solar PV plant are- • Availability of space • Availability of solar resource & climatic condition of the site • Site's ability to comply with aviation specific requirements etc. 2.1.

What are the requirements for airport solar PV installation?

Airport Solar PV Implementation Guidance Document 43 For Ground-Mounted Solar • Mounting system design needs to meet applicable local building code requirements with respect to snow, wind, and earthquake factors. • Mounting system can either be fixed tilt or single axis tracker.

Why do airports need solar PV projects?

Solar PV projects are also a visible means to demonstrate the implementation of environmental policies. However, developing solar PV project within Airports are different from that of developing it elsewhere as it requires certain additional planning and design strategies , various studies and a multidisciplinary team of experts.

Why do airports need solar energy?

Solar is one of the most convenient source of renewable energy for Airports. The plain topography, presence of flat building roofs and nature of Airport operational requirements favors solar PV as compared to other sources of renewable energy. Solar PV projects are also a visible means to demonstrate the implementation of environmental policies.
