

AC contactor for inverter

Overview

What is a contactor for a 1500 volt solar inverter?

contactors are specifically designed for 1500 V DC PV solar central inverters. These contactors are of the block type design with 2 main poles. The main poles are fitted with special arc in e range (e.g. 100. 250 V DC), only 2 coils to ariationsreduced panel energy consumptionvery 11.81"29 .5 11.5" 122 4.8.

What is AC contactor?

An AC contactor is an electromechanical switching device designed to switch AC loads on/off. It is used for switching high-current AC loads. The working principle of the AC contactor involves electromagnetic force cooperating with the spring force to make and break the connection between the source and load.

What are the components of an AC contactor?

There are three main components of an AC contactor: 1. Coil or Electromagnet
The coil or electromagnet acts as a control switch. It is wound with a number of turns of insulated wire and can be energized by AC voltage or DC voltage.

What type of contactor is suitable for AC motors?

The well may form an electromagnetic starter with appropriate thermal overload relays to protect circuits that may operate over load. Contactors are suitable for frequently starting and controlling AC motors. ADC3 series contactor conforms to IEC60947.4 and GB/T 14048.4 standards. CJX2N Series AC Contactor
