

All the battery storage in the world

Overview

Which countries have the most grid-scale battery energy storage systems in 2023?

This treemap, created in partnership with the National Public Utilities Council, visualizes which countries had the most grid-scale battery energy storage systems (BESS) in 2023. China has nearly half the world's grid storage battery capacity and keeps growing at a breakneck pace.

What is battery energy storage?

The global energy landscape is under a transformative shift, with Battery Energy Storage Systems (BESS) emerging as a crucial technology for supporting renewable energy integration and grid stability. As solar and wind power generation expand, efficient energy storage is essential for maintaining a reliable electricity supply.

What is a battery energy storage system (BESS)?

Over the past three years, the Battery Energy Storage System (BESS) market has been the fastest-growing segment of global battery demand. These systems store electricity using batteries, helping stabilize the grid, store renewable energy, and provide backup power. In 2024, the market grew by 52%, compared to 25% growth in the EV battery market.

How much battery storage does South Korea need?

Meanwhile, South Korea's capacity remained the same. The International Energy Agency estimates that 1,300 GW of battery storage will be needed by 2030 to support the renewable energy capacity required to meet the 1.5°C global warming target.
