## Overview

---

What is a lithium battery pack?

A lithium battery pack is a collection of individual lithium-ion or lithium-polymer cells grouped together to store and deliver electrical energy. These packs are widely used in applications such as electric vehicles, renewable energy systems, and portable electronics.

What is a 4s2p battery?

Example: A 4S2P configuration (4 cells in series, 2 sets in parallel) = 12.8V, 4Ah. Applications: Commonly used in renewable energy systems and electric vehicles. A BMS is the “brain” of a lithium battery pack, ensuring safety, performance, and longevity.

Should you assemble your own lithium battery pack?

Here are the key benefits of assembling your own lithium battery pack instead of buying a pre-made one: You can fully customize the battery’s voltage, capacity, discharge rate and charging parameters. This level of flexibility is useful for finding the optimal balance of features for your application.

What is a DIY battery pack?

A DIY battery pack is a custom-built energy storage solution created by connecting multiple individual battery cells, typically lithium-ion cells like 18650s, to meet specific voltage and capacity requirements. These packs are used in various applications, including electric vehicles, portable electronics, and renewable energy systems.
