

Base station equipment for Malaysian telecommunications operators

Overview

What is a Base Transceiver Station (BTS)?

A Base Transceiver Station (BTS) is essential equipment for wireless communication, creating a link between user devices—such as mobile phones, wireless local loop (WLL) phones, and computers with wireless Internet access—and a network.

What is a base transceiver station?

Base Transceiver Stations facilitate wireless communication between a cellular device and network. A Base Transceiver Station consists of the following: Antennas that relay radio message, Transceivers, Duplexers, and Amplifiers. The antenna provides network solutions by conveying radio message.

What is a base station (BTS)?

This network can utilize various wireless communication technologies, including GSM, CDMA, Wi-Fi, WiMAX, and other wide area networks (WAN). The BTS, sometimes referred to as a Radio Base Station (RBS), Node B (in 3G networks), or simply a Base Station (BS), is critical for reliable connectivity in both urban and remote areas.

Where is BTS - base transceiver station design & Network Solutions located?

Office Unit 1-3-3, Aras 2. Jalan Medan Pb 7. Pusat Bandar, Seksyen 9. 43650 Bandar Baru Bangi Selangor. We are a solution provider for BTS - Base Transceiver Station Design and Network Solutions in Malaysia and the region. Talk to us to find out more.
