

Battery cabinet flame retardant filler

Overview

Are new battery flame retardant technologies safe?

New battery flame retardant technologies and their flame retardant mechanisms are introduced. As one of the most popular research directions, the application safety of battery technology has attracted more and more attention, researchers in academia and industry are making efforts to develop safer flame retardant battery.

Should flame retardant be used in battery enclosures?

If a significant fire-safety benefit of flame retardant use in battery enclosures is demonstrated, then the least-harmful flame retardant should be used temporarily while a safer solution is being developed.

What is a flame retardant battery?

The battery consists of electrolyte, separator, electrode and shell, the traditional flame retardant method of battery is to modify the components to improve its flame safety.

How to make a battery flame retardant?

In addition to the flame retardant transformation of the battery itself, battery flame retardant can also be achieved by adding protection device outside the battery, such as wrapping a flame retardant shell outside the battery or installing an automatic fire extinguishing device, etc.
