Overview

Can I charge more than 4 12V batteries in a series connection?

You cannot charge more than 4 12V batteries in a series connection. Larger voltage LiFePO4 batteries like 24V and 48V won't work in a series connection. Since a series connection increases the battery voltage, you won't get a lower voltage from your battery pack without using a converter.

Can a 12V LiFePO4 battery be connected to a series?

Since you can only connect 12V LiFePO4 batteries, so you have no other choice. But use the same amps of batteries for the series connection. Note that- if all of your batteries are 12V and 100 amps, in this series connection, you will get $4 \times 12V = 48V$. But the amperage will remain the same, which is 100 amps.

How to connect a 12V battery with a series connection?

But use the same amps of batteries for the series connection. Note that- if all of your batteries are 12V and 100 amps, in this series connection, you will get $4 \times 12V = 48V$. But the amperage will remain the same, which is 100 amps. Now, take a jumper cable and attach it to the negative terminal of one battery.

What are the disadvantages of series connection for LiFePO4 batteries?

Now, let's check out the disadvantages of series connection for LiFePO4 batteries. Without using an additional controlling BMS over the batteries, LiFePO4 batteries won't charge in a series circuit. If one point of a series connection fails, your entire LiFePO4 battery pack will stop charging.
