

# Can the size of solar panels be customized

## Overview

---

Can I get a solar panel in a custom shape?

Yes, it is possible to get a solar panel in a custom shape. At Voltaic, we manufacture both standard and custom small solar panels, with most being rectangular, but we have experience designing and deploying a full range of interesting shapes and sizes.

What size solar panel do I Need?

Your personal needs will determine what size solar panel will suit you. If you have little space for panels, you will need a higher power rating panel, like a 400W panel. But, if you have a lot of space, then you can look at having more lower power rating panels.

Do all solar panels need to be the same size?

However, the solar panels must all be the same size, otherwise the controller will defer to the smaller panel. For example, if you connect 2 x 200W and 1 x 150W solar panels in one array, the controller will rate all the panels as 150 watts. So make certain the panels have similar watt outputs.

Why are custom-shaped solar panels more expensive?

We are happy to make custom-shaped solar panels, but they will be more expensive per Watt and generate less power per area than rectangular panels. A water jet or CNC machine is required to cut the urethane substrate or glass, making the process more complex and costly.

## Can the size of solar panels be customized
