

# Central Europe Rooftop Solar System

## Overview

---

What is the European Union's solar rooftop standard?

The European Union's Solar Rooftop Standard, part of the Energy Performance of Buildings Directive, could prompt the installation of 150-200 GW of rooftop photovoltaics, powering around 56 million European homes. The directive mandates new buildings to be solar-ready, aiming for widespread solar adoption.

When does the EU solar rooftop standard apply?

The EU Solar Rooftop Standard applies to new non-residential and public buildings from 2027, to existing non-residential buildings undergoing major renovations by 2028, to new residential buildings from 2030 and on all suitable existing public buildings by 2031.

Will the EU rooftop solar standard drive more rooftop solar capacity?

According to our analysis, the EU Rooftop Solar Standard within the EPBD could drive the installation of 150 to 200 GW of additional rooftop solar capacity in the EU between 2026 and 2030. · Critically, the Solar Rooftop Standard will unlock the potential of large rooftops such as those installed on offices, commercial buildings, or car parks.

How will the EU solar rooftop standard affect public buildings?

Public buildings like schools and hospitals will be particularly empowered by the EU Solar Rooftop Standard, which ensures they will benefit from solar-reduced energy expenses and dependence on fossil fuels.
