

# **China-Europe solar energy storage installation**

## Overview

---

Are Chinese-manufactured solar panels putting up in European warehouses?

Chinese-manufactured solar photovoltaic (PV) panels are piling up in European warehouses, with Rystad Energy forecasting 100 GWdc of solar capacity in storage by the end of 2023.

Which countries import the most solar panels from China?

Spain, Germany and France also imported more panels from China than they installed from any source. Greece has a similar profile to the Netherlands but on a smaller scale, with the country installing the equivalent of only 15% of the capacity imported from China.

Will China add more energy storage capacity in 2023?

InfoLink expects China to add 39 GWh of energy storage capacity in 2023. The U.S. added 8.2 GWh of installed energy storage capacity in the first half of 2023, far behind anticipations. Constructions under the IRA face delays worse than expected.

Where are Chinese solar panels coming from?

The imports are heading to several key destinations, including the Netherlands, Spain, Germany, Poland, France, Greece, Italy, and the UK. The Netherlands was the standout leader in Chinese PV imports in 2022, bringing in almost 45 GWdc alone, more than ten times the amount of panels installed domestically across the year.
