

Communication Green Base Station Fan Distribution

Overview

This paper proposes a novel ventilation cooling system of communication base station (CBS), which combines with the chimney ventilation and the air conditioner cooling. Stack effect is employed to e.

What is green communication?

Green communication is a major prospect of the next-generation wireless networks. In conventional 5G base stations with active cooling, energy consumption caused by air conditioning typically amounts to more than 20% of the total .

What is a passive cooled base station (PCBs)?

Branded as ultra-lightweight radio or ultra-lean sites –, passively cooled base stations (PCBSs) represent a promising solution for bringing down the energy consumption as well as network deployment cost.

Are passive cooled base stations effective?

Abstract—Passively cooled base stations (PCBSs) offer low deployment cost and energy consumption for the next generation networks. By its nature, however, dealing with the thermal issue becomes crucial. For an outdoor PCBS, a major challenge is that the heat dissipation is uncertain over time.
