

# **Cylindrical lithium iron phosphate battery charging**

## Overview

---

What are lithium iron phosphate (LiFePO<sub>4</sub>) batteries?

Lithium iron phosphate (LiFePO<sub>4</sub>) batteries are known for their high safety, long cycle life, and excellent thermal stability. They come in three main cell types: cylindrical, prismatic, and pouch. Each of these types has distinct characteristics that make them suitable for various applications.

What are the different types of lithium phosphate batteries?

1. Cylindrical LiFePO<sub>4</sub> Cells Cylindrical LiFePO<sub>4</sub> cells are the most commonly used type of lithium iron phosphate batteries. They resemble the shape of traditional AA or AAA batteries and are widely employed in applications where high power and durability are essential.

What is a lithium iron phosphate battery?

Battery test platform Lithium iron phosphate batteries are considered to be the ideal choice for electromagnetic launch energy storage systems due to their high technological maturity, stable material structure, and excellent large multiplier discharge performance.

What is the full name of LiFePO<sub>4</sub> battery?

The full name of LiFePO<sub>4</sub> Battery is lithium iron phosphate lithium ion battery. Because its performance is particularly suitable for power applications, the word “power” is added to the name, that is, lithium iron phosphate power battery.
