

Ecuadorian energy storage export company

Overview

Does Ecuador need a new energy source?

Ecuador urgently needs to accelerate new investments in power generation capacity and diversify its electricity sources. The Energy Ministry announced plans to add 541 MW in thermal generation in 2025 including the rental of three barges (300 MW), Salitral project (100 MW), Quevedo project (50 MW), and Esmeralda's project (91 MW).

Will Ecuador's energy shortage cause a recurrence of power outages?

Ecuador's energy shortage could result in a recurrence of power outages, particularly in the dry season of September through December. Ecuador has added minimal generation in recent years. In 2020, the Energy Ministry awarded two projects to the private sector: a 110MW wind farm (Villonaco), and a 200MW solar plant (El Aromo).

Will Ecuador get a nuclear power plant?

In May 2025, Ecuador became a member of the International Atomic Energy Agency (IAEA). The next step is to enact the legal framework to oversee and regulate nuclear energy. Only after the legal framework is in place could the Energy Ministry issue a public procurement for the first nuclear power plant in Ecuador.

Will Ecuador import natural gas?

Ecuador plans to accelerate the procedures to import natural gas to supply the largest thermoelectric plant in Ecuador, Termogas Machala, which works at 50 percent capacity.
