## Overview

What types of solar inverters are used in roof-top solar power plants?

In this blog, we will cover the common types of Grid-Tied or Grid Connected Solar Inverters used in roof-top Solar Power Plants: String Inverters, SolarEdge Optimizer System, and Enphase Micro-inverter System. Solar Power Plants that use only utility grid as a complementary source of power are called grid-tied or grid-connected systems.

What is a grid connected solar system?

A grid-tied solar system has a special inverter that can receive power from the grid or send grid-quality AC power to the utility grid when there is an excess of energy from the solar system. Figure. Grid-Connected Solar Photovoltaic System Block Diagram.

How do inverters provide grid services?

In order to provide grid services, inverters need to have sources of power that they can control. This could be either generation, such as a solar panel that is currently producing electricity, or storage, like a battery system that can be used to provide power that was previously stored.

What are the different types of solar inverters?

There are several types of inverters that might be installed as part of a solar system. In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels—a string—to one inverter.
