

How big an inverter should I use for a 12v 150A battery

Overview

How many Watts Does a 150 watt inverter hold?

A 12V 150ah battery can store 1800 watts so a 2000 watt inverter is the right size. A 24V 150ah battery holds up to 3600 watts, which means you should use a 4000 watt inverter. Inverter capacity is measured in watts. Battery sizes are measured in amp hours, so you need to find out how many watts a 150ah battery is.

Can a 150ah battery run an inverter?

150ah batteries are often used in off grid homes and RVs to run inverters. One of the things you have to do is make certain that the inverter is large enough, in this case for a 150ah battery. In this guide we will explain what capacity you will need. A 12V 150ah battery can store 1800 watts so a 2000 watt inverter is the right size.

How many Watts Does a 150 watt inverter battery last?

Use this guide to check how many watts your appliances are. But for a 150ah battery, you will only use a limited number. Assuming it is a 12V battery and good for 1800 watts, you can load a laptop, a TV, several lights, a fan and a small microwave. You can load all these and the inverter battery should last an hour. This is just an example.

Can a 1000 watt inverter run a 150 watt battery?

If you will only load 900 watts on a 12V 150ah battery, a 1000 or 1200W inverter will do fine. There are good reasons why you may not want to run the battery inverter at full capacity. The most important is that lead acid batteries have a depth discharge rate of 50%. What this means is with a 150ah battery, only 75ah is usable per charge.

To calculate the battery capacity for your inverter use this formula
$$\text{Inverter capacity (W)} \times \text{Runtime (hrs)} / \text{solar system voltage} = \text{Battery Size} \times 1.15$$

Multiply the result by 2 for lead-acid type battery, for lithium battery type it would stay the same
Example Let's suppose you have a 3000-watt inverter with an 85% efficiency rate and your daily runtime
