

# How many kilowatt-hours of electricity does a large energy storage cabinet have

## Overview

---

How much energy does a non-refrigerated warehouse use?

**Energy Consumption of Non-Refrigerated Warehouses:** An average non-refrigerated warehouse consumes approximately 6.1 kilowatt-hours (kWh) of electrical energy per square foot each year (Our World in Data). Additionally, these warehouses consume about 13,400 Btu of natural gas per square foot annually (Our World in Data).

How many kilowatts are in a gigawatt hour?

Gigawatt hour, abbreviated as GWh, is a unit of energy that represents one billion (1 000 000 000) watt-hours and is equal to one million kilowatt-hours. Gigawatt hours are mostly used as a measurement of the output of large electric power stations. One gigawatt could power 10 million watt bulbs.

Do energy storage facilities use more electricity than generate?

Energy storage facilities generally use more electricity than they generate and have negative net generation. At the end of 2023, the United States had 1,189,492 MW—or about 1.19 billion kW—of total utility-scale electricity-generation capacity.

How much gas does a warehouse use per square foot?

Additionally, these warehouses consume about 13,400 Btu of natural gas per square foot annually (Our World in Data). This high energy consumption necessitates finding ways to lower usage to reduce costs and environmental impact.

## How many kilowatt-hours of electricity does a large energy storage
