

Long-life mobile energy storage container

Overview

How does the energy storage system work?

These components work together to ensure the safe and efficient operation of the container. The capacity of cell is 306Ah, 2P52S cells integrated in one module, 8 modules integrated into one rack, 5 racks integrated into one container. As the core of the energy storage system, the battery releases and stores energy.

What is ENERC+ energy storage?

The EnerC+ Energy Storage product is capable of various on-grid applications, such as frequency regulation, voltage support, arbitrage, peak shaving and valley filling, and demand response. In addition, EnerC+ container can also be used in black start, backup energy, congestion management, microgrid or other off-grid scenarios.

What are the advantages of ENERC+ container?

The standard design can be installed one-stop. 2) New generation Cell. EnerC+ container integrates the LFP 306Ah cells from CATL, with more capacity, slow degradation, longer service life and higher efficiency. 3) High integrated. The cell to pack and modular design will increase significantly the energy density of the same area.

What is ENERC+ container?

7) Independent UPS. EnerC+ container have integrated two UPS system, one is for FSS monitoring system which available capacity is 24 hours, another one is for BMS which available capacity is 20 minutes. The UPS is only used to supply power to BMS components.
