

Multifunctional portable outdoor UPS power supply

Overview

What is a portable UPS system?

A portable UPS system immediately supplies power to all the loads when the power switch is turned on. This is a quick charging UPS system that helps in energy conservation. It is available in 3 models and is easily portable, making it popular and suitable for families in both urban and rural areas.

What is outdoor UPS & how does it work?

Outdoor UPS is designed for extreme demanding environments where clean backup power is needed. Built-in with AVR function, it helps to maintain normal operation without transferring to battery mode during . charging current The battery backup system provides constant and reliable backup power to outdoor equipment.

What is a universal power supply (UPS)?

Universal Power Supply (UPS). A UPS is a device that provides battery backup to critical components of the system, allowing them to stay online longer and/or allowing the IT staff to shut them down using proper procedures in order to prevent the data loss that might occur from a power failure. Alternate, or “hot” sites.

What power devices are used in ups?

1 Introduction The power devices used in UPS include bipolar power transistors, power MOSFETs, thyristors and IGBTs. IGBTs have the advantages of easy driving of power MOSFETs, simple control, high switching frequency, and low turn-on voltage of power transistors.
