

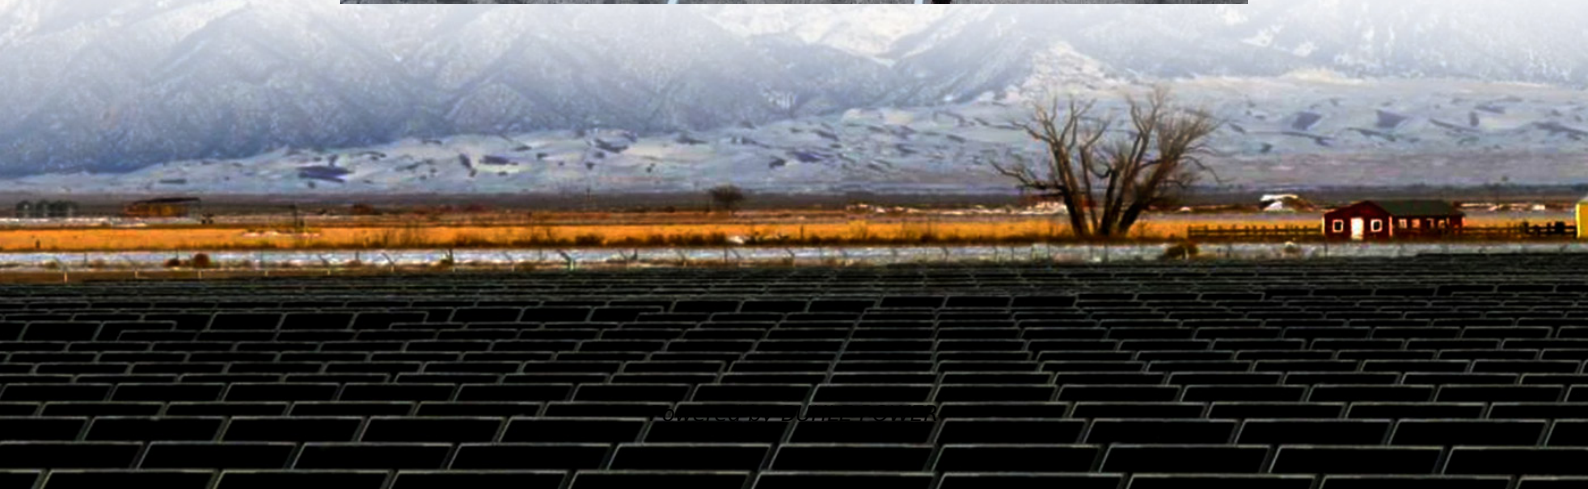

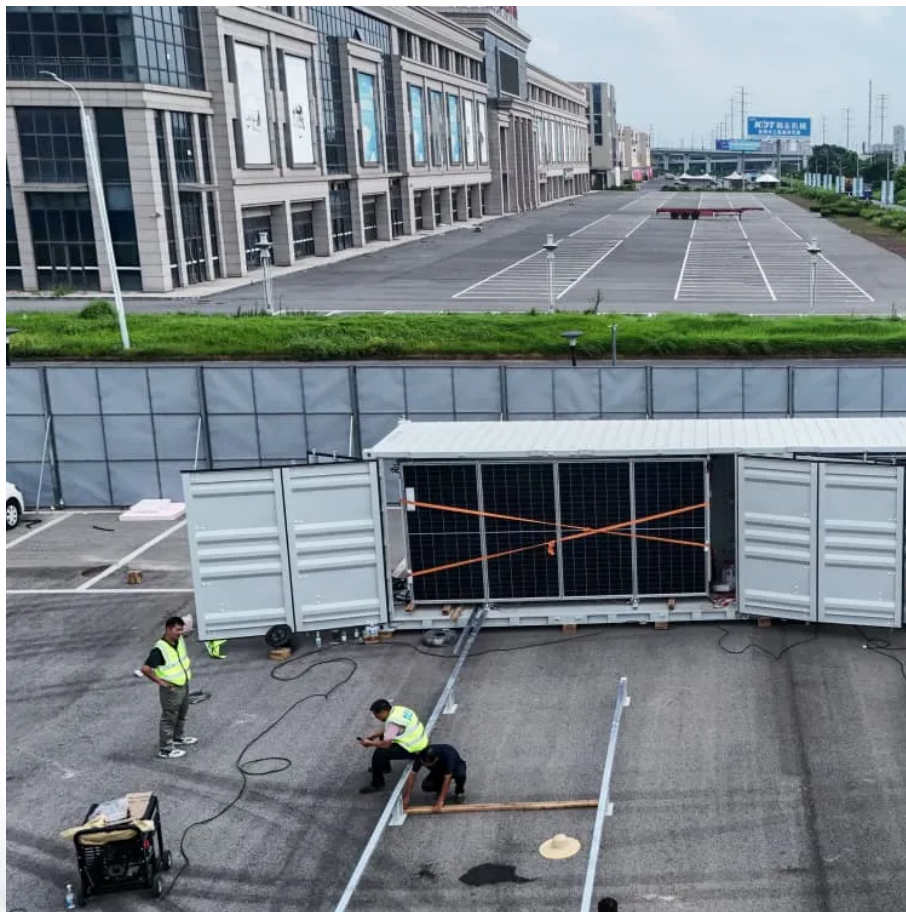

# **Photovoltaic Energy Storage Container DC Power Supply for Steel Plants**

## Overview

---

What is AC-coupled PV & energy storage?

In an AC-Coupled PV and energy storage solution (pictured in Figure 1, left side), both inverters employed can push power and can absorb or supply reactive power at the same time. The AC-Coupled system can produce peak PV power at the same time as the bi-directional inverter is discharging the full battery power to the grid.

What is a pvs-500 DC-coupled energy storage system?

The PVS-500 DC-Coupled energy storage system is ideal for new projects that include PV that are looking to maximize energy yield, minimize interconnection costs, and take advantage of the federal Investment Tax Credit (ITC). control how much reactive power is generated or absorbed by the inverters and can be used to help regulate system voltage.

What is a DC-coupled Solar System?

DC-Coupled system ties the PV array and battery storage system together on the DC-side of the inverter, requiring all assets to be appropriately and similarly sized in order for optimized energy storage and power flow. Mid to large-scale solar is a non-reversible trend in the energy mix of the U.S. and world.

How a solar energy storage center works?

In areas where steel plants are scattered, the energy storage center can be placed closer to the photovoltaic power plants, where the electricity generated by the solar plants is first consolidated in the storage center and then directly transmitted to the steel plants via the existing grid.

## Photovoltaic Energy Storage Container DC Power Supply for Steel P
