

# **Power plant energy storage power supply solution**

## Overview

---

Why do we need energy storage systems?

and the electrification of transportation and heating systems. As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

Can energy storage technology be used in power systems?

With the advancement of new energy storage technologies, e.g. chemical batteries and flywheels, in recent years, they have been applied in power systems and their total installed capacity is increasing very fast. The large-scale development of REG and the application of new ESSs in power system are the two backgrounds of this book.

What is pumped hydroelectric storage (PHS)?

In order to cope with the challenges brought by the large-scale REG integration to the planning and operation of power systems, the deployment of energy storage system (ESS) has become an important and even essential solution. At present, pumped hydroelectric storage (PHS) is the largest and most mature energy storage type applied in power systems.

Are energy storage technologies a viable solution for coal-fired power plants?

Energy storage technologies offer a viable solution to provide better flexibility against load fluctuations and reduce the carbon footprint of coal-fired power plants by minimizing exergy losses, thereby achieving better energy efficiency.
