

# Production price of solar modules

## Overview

---

Solar module prices in 2025 have stabilized after years of dramatic fluctuations, with global wholesale prices ranging from \$0.08 to \$0.28 per watt depending on technology, origin, and regional market conditions. Why do solar modules cost so much?

However, as the primary cost component of photovoltaic modules, the price of solar cells plays a decisive role in module pricing. Due to the oversupply of polysilicon in earlier periods, prices have been under sustained pressure since 2023, even falling below cost levels in the first half of 2024.

How did our solar PV module manufacturing plant's financial model work?

Our solar PV module manufacturing plant's financial model was meticulously modelled to satisfy the client's requirements. It provided a thorough analysis of production costs including capital expenditures, manufacturing processes, raw materials, and operating costs.

What factors affect the cost of photovoltaic modules?

1. Cost Factors Driving Price Fluctuations The cost of photovoltaic modules is primarily composed of solar cells, glass, encapsulation film, and labor expenses.

What is the production capacity of solar PV module?

The proposed facility is designed with an annual production capacity of 1,000 MW (1 GW) of solar PV module. Manufacturing Process: The first step in the production of solar PV modules is the melting and solidification of high-purity silicon pieces into polycrystalline ingots.
