

Solar shingle equipment

Overview

Where are solar shingles made?

GAF Timberline Solar Roofing System's solar shingles, the Timberline Solar[®] Energy Shingle (ES 2), are assembled domestically at GAF Energy's manufacturing facility in Georgetown, Texas and R&D facility in San Jose, California.

What is solar shingling & how does it work?

The technique of laying out solar cells in a module so that their edges overlap like shingles on a house roof is called »shingling«. With the shingled layout, there are fewer gaps between the individual solar cells so more of the sunlight that is incident on the module can be absorbed.

Are Timberline shingles solar-friendly?

Timberline Solar[®] ES 2 energy shingles are solar-savvy, designed to install directly onto the roof alongside Timberline[®] traditional asphalt shingles to create a fully integrated solar-power roof system.

What is a shingled solar module?

With the shingled layout, there are fewer gaps between the individual solar cells so more of the sunlight that is incident on the module can be absorbed. Instead of using external connectors to transport the current from one cell to the next, the area of the cell overlap is used as an electrical connector.
