

Solar street lighting

Overview

What is a solar street light?

A solar street light is a raised lighting system powered by a photovoltaic (PV) module charging a battery that runs an LED luminaire at night. Modern systems are off-grid, smart-controlled, and designed to operate through low-sun periods. Pole/brackets & wiring, optional sensors/remote monitoring.

How to design a solar street light?

1. Solar Street Lighting Demand Design Formula: $P_{LED} = E \times A / (\eta \times U \times K)$
Example: Road width 6m, distance between lights 25m, target illuminance 20 lx → $P_{LED} = 20 \times (6 \times 25) / (0.85 \times 0.5 \times 0.75) = 20 \times 150 / 0.32 \approx 94W$ → Choose a 100W LED module (Luminous flux 15,000 lm)
2. Solar Street Light Photovoltaic System Capacity Calculation Steps: 3.

Which solar street lights are available?

Our All-In-One Solar Street Light is available in the SIRIUS (INL-AIO9), GALAXY (INL-AIO6), ALIEN (INL-AIO5), and POLARIS (INL-AIO2) series. Utilizing the latest integrated design, the lithium battery, solar controller, and solar panel are all housed within the light casing.

How do solar street lights work?

Further, this solar street light works with a combination of auto mode and motion sensors. Herein, while the auto-mode turns the light on at dusk, motion sensors control illumination to save energy. Pro: If you have some hands-on experience working with street lights, you can easily install these lights by yourself.
