

# **Specifications of home energy storage batteries**

## Overview

---

Which battery system is best for home energy storage?

All-in-one battery energy storage system (BESS) - These compact, all-in-one systems are generally the most cost-effective option and contain an inverter, chargers and solar connection in one complete unit. Modular DC Battery System - Hybrid inverters for home energy storage are connected to a separate, modular DC battery system.

What is battery capacity?

Battery Capacity: This refers to how much electricity a battery can store, measured in kWh. To determine the appropriate capacity, consider the total energy consumption of your home during the hours you plan to rely on the battery.

What is the optimum battery size for a home?

Over the years of installing and monitoring home battery systems, we have found the most economical battery size for an average home is typically 6kWh to 10kWh. However, for modern all-electric homes and those with home electrical vehicle chargers, the optimum battery size for maximum self-consumption is increasing.

What are the different types of home energy storage systems?

The two most common types of home energy storage systems are: All-in-one battery energy storage system (BESS) - These compact, all-in-one systems are generally the most cost-effective option and contain an inverter, chargers and solar connection in one complete unit.
