T-type solar inverter

Overview

What is a T-type solar inverter?

Peak efficiency at partial load is critical. This is the defining use case for T-type, making it ideal for solar string inverters, which spend most of their operational life at 20-60% of their rated power. The superior conduction loss performance directly translates to more harvested energy.

What is a T-type inverter rated at 22 kVA?

The demo model shows an example of a T-type inverter rated at 22 kVA that converts an 800 V DC-bus into a three-phase 60 Hz, 480 V (line-line, rms) distribution for industrial applications. All 12 devices are configured to demonstrate the thermal loss performance of different Wolfspeed SiC MOSFETs.

What is a T-type 3-level inverter?

The next step up from a standard two-level inverter is a T-type three-level inverter. This type is implemented by inserting two back-to-back switching devices between the switch node and the neutral point of the DC link created by the bulk input capacitors.

What are the topologies of a 3 level inverter?

Within the 3-level inverter family, two prominent topologies stand out: the T-type and the T-type Neutral Point Clamped (T-NPC), also commonly known as Active NPC (ANPC). While both aim to achieve similar outcomes, their internal structures, loss characteristics, and operational trade-offs are significantly different.
