## Overview

---

What is an industrial uninterruptible power supply system?

Industrial uninterruptible power supply systems (UPS Systems) include core technologies to cover industrial equipment. Our systems offer applications ranging from a few hundred watts to massive Multi-Mega Watt Parallel UPS installs inclusive of voltage regulations, voltage correction, sag correction, surge suppression and harmonic mitigation.

What is a single-phase online uninterruptable power supply (UPS)?

Our integrated circuits and reference designs for single-phase online uninterruptable power supply (UPS) help you design reliable and robust hardware with very low input and output total harmonic distortion (THD) and increased efficiency. Modern single-phase online UPS designs often require:.

What makes a good single-phase UPS design?

Modern single-phase online UPS designs often require: Higher performance and reliable IGBT and MOSFET gate drivers. Innovative battery backup designs with highly-efficient bidirectional topologies. Accurate sensing of voltage and current with or without isolation.
