Uninterruptible Power Supply Introduction

Overview

What is a uninterruptible power supply (UPS)?

A UPS, or a uninterruptible power supply, is a device used to backup a power supply to prevent devices and systems from power supply problems, such as a power failure or lightning strikes.

Do uninterruptible power supply systems provide protection?

"Uninterruptible power supply systems provide protection." IEEE Industrial Electronics Magazine 1, no. 1 (2007): 28-38. Rahmat, M., S. Jovanovic, and K. L. Lo. "Reliability and availability modelling of uninterruptible power supply systems using Monte-Carlo simulation.".

Why is uninterrupted power supply important?

To protect device security and ensure working efficiency, an uninterrupted power supply can be a credible assurance. How Does Uninterruptible Power Supply Work?

Are UPS uninterruptible?

UPSe aren't uninterruptible. They're electrical or mechanical devices, so they not only require routine maintenance, but also are subject to component failures. For these reasons, all UPS systems have a built-in bypass to route incoming power around the system and directly to the ITE when necessary.
