What are the specifications of a micro-inverter?

Comparison of micro-inverters with rated output power between 350VA and 400VA: Subject to further modifications, the micro-inverter should have the following specifications: Power: 400VA with possibility of software limitation. Total Harmonic Distortion (THD) < 5%. Optional features:.

How to use the monitoring system of WVC series micro inverters?

If you want to use the monitoring system of WVC series micro-inverters, you must install and set up WVC series WiFi data collector. WiFi data collector is the data exchange bridge of WVC series micro- inverters.

How was the circuit design of a micro inverter simulated?

The circuit design of the micro inverter was simulated in LTspice. All LTspice simulations are stored in the simulation folder. Since the entire circuit design is quickly complex and time-consuming to simulate, the individual building blocks of the circuit were first built and simulated individually.

Why do we want to build an open source Micro-inverter?

We want to build an open source micro-inverter. Why making this open source?

Transparency and Trust: Open sourcing fosters transparency, providing users and developers with complete visibility into how the microinverter works. This builds trust within the community and ensures that the technology operates as advertised.
